

ABSTRACT

Provided is a protective garment, much like a bib having an outer surface and inner surface for disposition over a user's clothes. The bib comprises, a back panel having an upper and a lower edge, a pair of shoulder panels extending from the upper edge of the back panel, each shoulder panel having a medial end and a lateral end, a neck opening having a peripheral border defined by the upper edge of the back panel and respective medial ends of said shoulder panels, two chest panels, each having a medial and lateral side, depending from an associated shoulder panel in laterally spaced apart relation to one another, thereby defining a generally longitudinal opening therebetween, a fastener associated with at least one of the medial sides of the chest panels for releasably joining the chest panels together in overlapping fashion so that said generally longitudinal opening is closed releasably.
